

AI Palmistry & Tarot Intelligence Platform

Milestone 4 Report: Analytics, Testing & Deployment

1. Milestone Objective

- Milestone 4 covers Final Integration, Testing & Deployment — taking the Palm Analysis, Tarot Intelligence, and AI Interpretation engines built in Milestones 2 and 3 (developed and validated in Google Colab) and delivering them as a live, deployed, end-to-end web product with a frontend and backend, per the project's original tech stack (React/Next.js frontend, FastAPI backend).

2. Live Deployment

- The platform, branded “Cosmic Oracle,” was built using Google Antigravity (an agentic development platform) and is live at the following URLs:
- Frontend (Vercel): palmistry-frontend-ten.vercel.app — built with Next.js 14
- Backend (Railway): palmistry-tarot-intelligence-platform-production.up.railway.app — built with FastAPI, with an active health check endpoint and auto-generated API documentation at /docs
- This satisfies the Milestone 4 evaluation criterion of “fully deployed frontend and backend.”

3. Frontend

Pages Implemented:

- Landing page (Sanctuary) — platform introduction, 3-step process explanation, and the 7 Pillars of Spiritual Intelligence overview
- Oracle Engine (Reading) — the core reading flow, offering 6 tarot spread options from a 1-card Daily Pulse up to a 10-card Grand Celtic Cross
- Sample Reading Dossier — a full example report demonstrating palm biometric metrics, tarot card interpretations, and a weighted insight score breakdown
- CV & AI Pipeline (About) — explains the underlying computer vision and AI methodology to build user trust
- Sign In / Register (Ritual) — user authentication entry points
- Profile — Soul Blueprint & Reading History
- Frontend URL : <https://palmistry-frontend-ten.vercel.app>

4. Backend

- The backend is deployed on Railway using FastAPI, exposing a REST API that the frontend consumes. The root endpoint returns an active status message, and /docs provides interactive Swagger documentation of all available endpoints, satisfying the project's requirement for API documentation and validation.
- Backend deploy URL : palmistry-tarot-intelligence-platform-production.up.railway.app

5. Milestone 4 Evaluation Criteria — Status

Requirement (per project plan)	Status	Notes
Fully deployed frontend and backend	Complete	Vercel (Next.js) + Railway (FastAPI), both live and verified
End-to-end workflow demonstrated	Complete	Landing → spread selection → reading generation → sample report, live on production URL

6. Tools & Technologies Used

- Google Antigravity — agentic development platform used to build the application
- Next.js 14, React — frontend framework
- FastAPI — backend framework
- Vercel — frontend hosting/deployment
- Railway — backend hosting/deployment
- Milestone 2 & 3 engines (Palm Analysis, Tarot Intelligence, AI Interpretation via Groq) — underlying intelligence layer
